APPLICANT : HITACHI LTD;

INVENTOR : TAKAHASHI KENGO;

INT.CL. : H02K 1/24

TITLE : SALIENT-POLE TYPE ROTOR

ABSTRACT : PURPOSE: To prevent the opening from the inner peripheral side of a pole by projecting a rim terminal board to cover the axial end of a pole terminal board of a dovetail slot, and providing a retaining bolt for retaining the pole terminal board of the dovetail slot at the projected portion.

CONSTITUTION: A salient-pole type rotor is mounted through a spider 1 on a rotational shaft 1a, and composed of a rim 4 having a rim terminal board 3a clamped by a bolt 2 to the axial end, poles 8 having a pole terminal board 7 clamped by a bolt 6 to the axial end of a laminated core 5, and a field coil 9 mounted on the poles 8. The board 3a is projected to cover the axial end of the pole terminal board 7b of a dovetail slot 4a, and a retaining bolt 12 for retaining the board 7b of the dovetail slot 3a is provided at the projected portion.
